

Fifteen to the acre.

A marketing and growth strategy for a 25-acre, four-community residential development on the Amaravati–Mangalagiri corridor — and a governed way to fund it.

PREPARED BY

Kiran Basa

SUBMITTED TO

Mr. Anudeep

SCOPE

~25 acres · ~₹500 Cr
project context · four
communities, 2BHK to
villas

THE ASK

₹25 lakh released against
a governed envelope

How to read this deck. Every slide carries a source strip. Four labels are used throughout and never blurred: **ASSIGNMENT ASSUMPTION** what I was given · **RESEARCHED** with a source ID · **DERIVED CALCULATION** my own arithmetic on stated inputs · **WORKING ASSUMPTION** requires KMV validation. **No figure here has been confirmed by KMV Spaces.** The exact location, product mix, launch dates, approvals, pricing, inventory and commercial assumptions were not provided, and nothing in this deck should be read as a KMV fact.

The whole argument, before the evidence for it

Six positions. Each is defended in the slides that follow, and each names what would falsify it.

01 · THE OPPORTUNITY IS REAL, AND NARROWER THAN IT LOOKS

Amaravati’s capital status is now **statutory**, and capital works are funded and active [S01][S02]. But of 300+ listed corridor projects, **eleven** genuinely compete — and the corridor is **crowded at the bottom, thin at the top**.

02 · FOUR COMMUNITIES ARE FOUR BUSINESSES

Differentiated by **buyer constraint, not finish level**. The binding constraint is **cash at purchase**, not income — ₹17.6 lakh for A rising to ₹74.1 lakh for D. One media plan across four communities would misprice all four.

03 · THE POSITION MUST BE PROVABLE, NOT ASPIRATIONAL

“Luxury”, “premium” and “close to the capital” are universal in this corridor and therefore worthless. **I would position on one computable fact and an invitation to check it.**

04 · THE HEADLINE BUDGET IS NOT A MARKETING BUDGET

₹31.75 Cr bundles four economically different things. **True marketing operating expense is ₹23.80 Cr**; media is ₹14.65 Cr — **₹32.6 lakh a month** across a 45-month sell window.

05 · SITE-VISIT CONVERSION, NOT MEDIA PRICE, IS THE LEVER

The conversion rates are multiplicative and therefore equally sensitive — but they differ in cost to fix. **One point of site-visit-to-booking is worth ₹39.4 Cr at zero additional media.** No media buy returns that.

06 · SO I WOULD NOT RELEASE THE MONEY ON A FORECAST

I would ask for ₹25 lakh — about 1% of the envelope — to establish cost per lead, cost per qualified lead and cost per qualified site visit, **with the stop condition agreed before the money moves.**

THE SENTENCE THIS DECK EXISTS TO EARN

Marketing investment should be earned by performance, not committed by forecast.

What I was given, what I researched, and what I assumed

This slide exists so nothing later can be mistaken for a KMV-confirmed fact. **The three columns never mix.**

1 · GIVEN – THE ASSIGNMENT • ~25-acre residential development • ~₹500 Cr project value / budget context • Amaravati-Mangalagiri region • Four communities — A, B, C, D • Product spectrum 2BHK apartments → premium residences → villas Not given: exact location, product mix, launch dates, approvals, final pricing, inventory, construction status, or any commercial assumption.	2 · RESEARCHED – WITH SOURCES • Regional market and capital status [S01][S02][S18] • Infrastructure, graded asset by asset [S03][S04][S09][S10] • Competitive field — 11 of 300+ projects clear the screen [S12][S13][S15] • Pricing evidence, bottom-up [S11][S12][S13][S15] • KMV public presence and the AIIMS credential [S05][S16][S17] • Land pooling — the S4 audience signal [S07][S08] The retrieval limit: search worked, page retrieval did not. Every URL resolves; none was opened. See Appendix G.	3 · DERIVED OR ASSUMED – MINE, NOT KMV'S • Inventory 376 units · density 15.0/acre • Unit mix A 169 · B 84 · C 60 · D 63 • Price ladder ₹5,150–7,200/sq ft · blended ₹6,098 • Revenue ₹506.7 Cr · gross margin 28% (a placeholder) • All conversion rates · all funnel volumes • Marketing investment, allocation, CAC, CPL, CPQL, CPSV • Site-visit and booking assumptions · cancellation 8% · ROMI Every item in this column requires KMV validation. None is a finding.
THE ONE THING I WOULD NOT LET A DECK HIDE No primary buyer research exists anywhere behind this work — no surveys, interviews, CRM data or walk-in analysis. Every behavioural attribute across eight segments is hypothesis. No transaction data was obtained either: every price I quote is an asking price. That is why the recommendation is a ₹25 lakh test rather than a media plan.		

The market, honestly graded

Everything in this section is researched and sourced. Where the evidence would not carry a claim, the claim is dropped rather than softened.

The strongest fact available — and what it still does not prove

Amaravati’s status changed in law in April 2026. That is a genuine change in the risk profile of this corridor. **It is not, by itself, evidence of housing demand.**

WHAT THE EVIDENCE ESTABLISHES	GRADE	SOURCE
Amaravati is Andhra Pradesh’s sole capital, by Act of Parliament	Confirmed	[S01]
Capital works active and funded — ₹57,821 Cr in progress, ₹15,000 Cr in the 2025–26 budget	Confirmed	[S02]
AIIMS Mangalagiri operational, ~3 km from the corridor	Confirmed	[S03] [S04]
Land pooling phase 2 authorised — 16,666.57 acres, 7 named villages	Confirmed <i>(authorised)</i>	[S07] [S08]
No verified 2026 count of people working in Amaravati exists	Gap	—

THREE CAUTIONS I WOULD PUT IN FRONT OF ANY INVESTMENT COMMITTEE

- 1 • Statutory status is not population.** No verified count exists of people living in the capital region as a result.
- 2 • The relocation evidence is nine years stale.** The only headcount figures found — ~2,000 secretariat staff against a 15,000 target — are 2016 reporting [S19]. I have de-weighted the government segment accordingly.
- 3 • Construction spend is not consumer demand.** ₹57,821 crore of works generates contractor and labour activity. It does not establish that anyone will buy a ₹2.5 crore villa.

Why this matters for the budget. A capital-status narrative is the cheapest story in this corridor to tell and the easiest to over-fund. Three competitors already carry “Amaravati” or “Capital” in their project name. **I would not build the position on it.**

Sources [S01] [S02] [S03] [S04] [S07] [S08] [S19] Basis Researched. The three cautions are my inference from the evidence, not a source claim
Falsified by A current, verified capital-region headcount showing material in-migration

I would grade every asset before any of it reaches a hoarding

Indian real-estate marketing overstates infrastructure more reliably than anything else. **A brand positioned on being checkable cannot.** This is the grading I would enforce.

ASSET	GRADE	WHAT MAY BE SAID	SOURCE
Amaravati as sole capital	CONFIRMED	State it plainly — the strongest fact available	[S01]
AIIMS Mangalagiri, operational	CONFIRMED	An operational hospital ~3 km away	[S03][S04]
Capital works active and funded	CONFIRMED	Works are active, with figures	[S02]
Bangalore-Vijayawada Expressway	UNDER CONSTRUCTION	“Under construction” — never “complete”	[S10]
Amaravati Outer Ring Road — 189 km, ₹16,000 Cr	APPROVED	“Approved, land acquisition begun.” Never “coming”	[S09]
Amaravati greenfield airport	SPECULATIVE	Do not mention at all. No DPR or notification found in two separate searches	—
Metro	NOT ESTABLISHED	Do not mention. No 2026 status found	—

THE ORR IS THE DISCIPLINE TEST, AND IT IS THE ONE MOST LIKELY TO BE FAILED

It is **genuinely approved**, genuinely 189 km, genuinely ₹16,000 crore — and **genuinely not built**, with land acquisition only beginning.

The category routinely presents exactly this status as an existing amenity. **The distinction is one word: approved, not coming.** I would hold every asset to it.

WHAT I WOULD NOT DO

Assume future infrastructure creates demand. The corridor already contains projects marketing an unbuilt airport. Joining them costs the one asset this brand would have — that its claims can be checked.

Sources [S01] [S02] [S03] [S04] [S09] [S10] Basis Researched. Grades applied by me against a stated six-level rubric

Rule Nothing graded PROPOSED, REPORTED or SPECULATIVE may appear in any published claim

Of 300+ listed projects, eleven actually compete

The screen is itself the finding: **the corridor is crowded at the bottom and thin at the top**. Four projects overlap on all six screening dimensions.

COMPETITOR	SCALE & DENSITY	PRICE EVIDENCE	WHERE IT IS WEAK
IJM Raintree Park <i>(Dwaraka Krishna)</i>	120 ac · ~3,300 planned	Apartments ~₹3,900/sq ft; villas to ₹10,143	Has the full ladder and has never marketed it as one — built over 18 years under five names
IJM Villas 64	33.69 ac · 64 villas · 1.9/acre	From ₹3.75 Cr	Owens the top outright. ₹3.75 Cr floor excludes almost the entire corridor buyer base
Prime Grandeur	10 ac · 119 villas · 11.9/acre	₹1.34–1.82 Cr · ₹5,394–5,403/sq ft	The most direct competitor. Value-led, no proof layer
Manjeera Monarch	Apartments · 113/acre	₹5,100/sq ft — delivered	Documented carpet-area complaint: <i>“the area advertised is not what residents actually get”</i>
Srivalli Pravas · Jayabheri · Grand Project Capitol · Aparna · TAG AIRA · KMV Vivaan · CRDA plots	—	—	Seven further entrants; none publishes delivery evidence

Sources: [S12] [S13] [S15] — portal-published asking prices and project pages. Density figures are derived from published acreage ÷ published unit counts where both exist.

Sources [S12] [S13] [S15] Basis Researched. The screen, the density arithmetic and the white-space test are mine

Caution **Jayabheri The Capital** returned no search result at all, and unit counts for two density comparators are unpublished — see slide 13

WHERE I JUDGE KMV CAN WIN — AND WHERE IT CANNOT

Not on scale. Raintree Park is 120 acres. **Not on lowest density** — IJM Villas 64 runs 1.9/acre and Prime Grandeur 11.9. **Not on luxury, premium, amenities or proximity to the capital** — all four are universal here and therefore say nothing.

Two spaces survive the test of being unoccupied, valuable and hard to copy inside 24 months:

WHITE SPACE 1 — THE LADDER IN ONE ADDRESS

Nobody in this corridor sells **a community you can move within**. It needs 25+ contiguous acres and a mixed masterplan committed from day one — it cannot be retrofitted onto a 5-acre tower cluster.

WHITE SPACE 2 — DELIVERY PROOF (*CHEAPEST TO OCCUPY*)

The complaints across the set are consistent — carpet area, maintenance, unfulfilled amenity promises, late handover — and **not one competitor markets against them**. A competitor carrying those complaints cannot credibly follow.

I would prioritise on cash at purchase, not on income

The binding constraint in this catchment is **the down payment, not the EMI** — ₹17.6 lakh for Community A rising to ₹74.1 lakh for D. Two households on identical incomes can have completely different ability to clear it.

	SEGMENT	PRIORITY SCORE	HORIZON	COMMUNITY FIT	WHY IT RANKS HERE
1	S3 — US / developed-market Telugu diaspora	4.20	Mid	B and C	Highest revenue per unit; buys remotely; the visit is the constraint, not the money
2	S4 — Amaravati land-pooling landowners	4.05	Long	D and C, via exchange	Best-evidenced population, no competitor contesting it [S07][S08]. Needs an exchange structure, not a price list
3	S1 — Vijayawada / Guntur trade families	4.05	Near	C and D	Deepest purchase-ready cash pool. Runs on referral, not advertising
4	S7 — Hyderabad Telugu households with AP roots	3.90	Mid	B and C	Large, wealthy, four hours away, and unaddressed by the competitive set
5	S2 — Senior institutional medical professionals	3.90	Near	A through C	Highest reachability; the only genuinely digital-first audience; dated purchase triggers
6	S6 — Vijayawada salaried upgraders	3.20	Near	A and B	Most contested and least valuable — 21% of units, 13.7% of revenue
7	S5 — Government / capital workforce	2.95	Near	A	De-weighted. Its sizing rests on 2016 reporting [S19] — nine years stale
8	S8 — Gulf remittance households	2.45	Long	A and B	Different income, product fit, language and channel from S3. One campaign cannot serve both

Priority score is a weighted composite I built – cash-gate clearance 20%, reachability 15%, and four further criteria. **Scores, segment sizes and every behavioural attribute are working assumptions: no primary buyer research exists.**

THE CHECK I WOULD RUN ON ANY PRIORITISATION

Does the priority order reconcile to where the revenue is? Here it does: the three HIGH segments deliver **53.8% of revenue from 43% of units.**

And the arithmetic settles a debate that otherwise becomes an opinion: **every rupee spent winning a contested S6 sale buys less than half the revenue of an uncontested S3 sale** — ₹0.83 Cr per unit against ₹1.96 Cr.

WHAT I WOULD NOT ASSUME

“NRI” is not a segment. It splits into S3 and S8, which differ in income, purpose, product, language and channel. **Every competitor in the set collapses them into one.**

“HNI” is not a segment here either — and the product is not an HNI product. Community D tops out at ₹2.74 Cr. Marketing to “HNIs” would promise a tier the price sheet does not deliver.

Sources [S07] [S08] [S19] Basis Segment definitions researched; scoring, sizing and revenue split are derived Requires validation 24 months of CRM lead data by source, and a current capital-region headcount

Proposed positioning architecture — four buyer constraints, not four finish levels

This is a proposal, not a product fact. Unit counts, sizes, prices and mix are my derivation from a 25-acre parcel and researched competitor pricing. **All of it requires KMV validation.**

	A	B	C	D
Proposed product	Low-rise garden apartments	Managed residences	Compact detached villas	Estate villas
Units · revenue	169 · ₹126.2 Cr	84 · ₹112.5 Cr	60 · ₹109.2 Cr	63 · ₹158.8 Cr
Ticket	₹59-90 L	₹1.23-1.45 Cr	₹1.69-1.95 Cr	₹2.30-2.74 Cr
Cash at purchase	~₹17.6 L	~₹31.5 L	~₹52.0 L	~₹74.1 L
Customer	Junior medical, local upgraders, government	US / developed-market diaspora	Trade families, senior medical	Trade families, land-pooling landowners
The need it answers	“Can I own here at all?”	“Can I own this from 12,000 km away?”	“Can I have land without ₹2.5 crore?”	“Is this the last house I buy?”
Positioning	Entry, rental logic, proximity	Management and absence	Land and privacy at a reachable ticket	Scale and permanence
Message	“The address you were told you could not afford”	“Owned from anywhere. Looked after here”	“Your own ground, without the villa premium”	“Built to be inherited”
Channel mix	Meta, portals, local outdoor	LinkedIn, diaspora networks, video walkthrough	Google Search, referral, site	Referral, village relationships, private visits
Conversion event	Site visit → token	Proxy visit → remote booking file	Site visit → plot selection	Private visit → family consultation
Sales cycle	2-4 months	6-12 months	4-8 months	6-14 months

TWO STRUCTURAL RULES, NOT PROMOTIONAL ONES

B never above ₹1.50 Cr. C never below ₹1.65 Cr. Without them B and C collapse into one product and the ladder becomes a price list.

B is defined by service; C is defined by land. A buyer choosing between them is choosing between two different products, not two price points.

WHY THEY CANNOT SHARE A CAMPAIGN

Different **cash gate** (4.2× from A to D), different **cycle** (2 months to 14), different **objection**, and different **proof**. A shared campaign optimises to the cheapest lead, which is Community A — the community with the least pricing headroom.

One computable fact, and an invitation to check it

The corridor’s advertising is generic and proof-free. **In a market where nobody publishes evidence, the strongest available position is to publish it.**

Not “luxury”. Not “premium”. Not “close to the capital”. **Fifteen homes to the acre, across twenty-five acres — and everything else is open to inspection.**

DIMENSION	FACT	MARKETING NARRATIVE	FUTURE POSSIBILITY
Density	15.0 units/acre across 25 acres DERIVED	“A community you can count”	—
Capital	Statutory sole capital [S01]	“The city is now certain; the question is where in it”	Population growth — unevidenced
AIIMS	Operational, ~3 km [S03]	“Your workplace is the anchor of the neighbourhood”	—
ORR	Approved; land acquisition begun [S09]	“Approved — and we will say so until it is built”	Travel-time change — do not model it
Airport / metro	Nothing found	Silence	Not ours to sell
Delivery	Category complaints documented [S12]	“We publish carpet area, handover dates and progress”	—

THE CREDENTIAL I WOULD NOT BUILD ON UNTIL IT DOCUMENTS

The strongest brand asset available would be construction lineage — the group’s own site presents an AIIMS Mangalagiri credential [S17].

But the Ministry’s own tender document names HSCC as executing agency [S05], and no source I found establishes the group’s contractual scope.

I would not publish it until a work order defines it — and then I would claim exactly that scope, in those words.

AND THE FALLBACK, WHICH IS NOT A RETREAT

If the credential does not document, the position falls back to two things that are **provable without any credential at all: the density arithmetic and an ungated price sheet.**

That is a deliberate design choice. **A position that collapses when one document is missing is not a position.**

Sources [S01] [S03] [S05] [S09] [S12] [S17] Basis Researched facts; the positioning and the fallback are my recommendation

Falsified by The density comparators failing to source, or the locality refusing the price premium

The plan I would run

From here on the labels change. Almost everything is derived or assumed — and it is marked that way on every slide.

Six phases across 45 months — each one a gate, not a date

The sell window is a **working assumption** derived from 376 units at a modelled velocity.
Every phase releases capital only when the previous phase’s KPI gate is met.

PHASE	WINDOW	OBJECTIVE	PRIMARY CHANNELS	GATE TO UNLOCK THE NEXT RELEASE	DECIDES
0 · Intelligence & validation	Months 1–2	Discover the economics. Not to generate sales	Meta · Google Search · one portal · YouTube. Nothing else	CPL ≤ ₹1,550 · cost per qualified site visit ≤ ₹42,000	Marketing lead sign-off; CFO notified
1 · Launch preparation	Months 3–6	Build what the funnel cannot work without	Not a media phase. CRM, tracking, website, first show home, sales training	CRM live · first-touch attribution mandatory · WhatsApp API integrated · all figures reconciled. All four, binary	CEO + CFO
2 · Controlled market entry	Months 7–15	Prove the funnel converts at viable cost, at real scale	Digital performance. Outdoor capped at 2 boards . No large event	≥ 55 bookings · CPL within +25% of Phase 0 · show rate ≥ 60%	CEO + CFO
3 · Scale	Months 16–30	Scale what proved, on validated economics	Full mix. Outdoor and print unlock only now	Site-visit-to-booking ≥ 5.5% over two quarters · CAC ≤ ₹9.5 L	CEO + CFO, quarterly
4 · Optimisation	Months 31–42	Shift the mix from paid to earned as referral compounds	Referral, owner community, channel partners; paid declining	Referral ≥ 0.15 per owner-year · CAC falling quarter on quarter	Marketing lead; CFO notified
5 · Inventory clearance	Months 43–51	Final demand capture on residual inventory	Retargeting, channel partners, owner referral	Inventory < 15% · referral ≥ 25% of bookings	Marketing lead

IF PHASE 0 FAILS

Stop. Re-base the model before any launch commitment. I would not proceed at reduced scale on a failed cost per lead — **a bad unit economic does not improve with volume.**

IF A LATER GATE FAILS

Cut inventory release before raising budget. A community missing its gate has its release reduced, not its spend increased.

IF A GATE FAILS TWICE

Nothing releases, regardless of explanation. Agreed now, because it will not be agreeable later.

Basis Derived. Phase windows, gates and thresholds are my proposal on a modelled 45-month sell window Requires validation Construction and handover milestones, approvals status, and the launch date

Rule Capital is released against evidence, not calendar

Eleven stages — and the two that were missing from my own first model

Raw leads are not success. **66,406 leads are lost at the top of this funnel and they are the least valuable losses in it.**

A 60% show rate converts 4,870 booked visits into **2,922 held and debriefed** — 23.4% of qualified leads, and 15.0 held visits a week across the modelled window. Bookings are shown gross of cancellation; 409 gross nets 376. Every rate is a working assumption.

WHY I WOULD JUDGE THE PLAN ON CPQL, NOT CPL

Cheap leads that fail the cash gate are a cost, not a result. CPL is a buying metric; CPQL is a business metric.

At the modelled rates, media buys a lead for **₹1,247** and a qualified lead for **₹7,889**. **A campaign optimised to CPL will find the cheapest audience, which is the one that cannot clear ₹17.6 lakh in cash.**

AND WHY THE QUALIFIED SITE VISIT IS THE METRIC THAT MATTERS MOST

The conversion rates are **multiplicative**, so a 25% move in any of them changes bookings by the same 25%. What separates them is **cost to fix and who controls them**.

Cost per lead is set by the auction and by competitors. Lead-to-qualified and qualified-to-visit are process, and cost almost nothing to move. And the last one is the largest opportunity:

₹39.4

CRORE PER POINT

One point of site-visit-to-booking — 6.9% to 7.9% — at zero additional media

Twenty-two channels evaluated; five cut, three capped

I would not recommend every channel equally. **Each one earns a role, a funnel stage, a KPI and a stop condition — or it does not run.**

TIER	CHANNEL	ROLE	FUNNEL STAGE	KPI	SCALE WHEN	STOP WHEN
1	Site / experiential	The product, not collateral	Visit → booking	Visit-to-booking	Always — ₹39.4 Cr per point	Never; fix it instead
1	Referral	The compounding asset	Advocacy	Referral per owner-year	Once owners exist	Never
1	Channel partners	28% of bookings, paid on performance	Lead → booking	CP bookings; discount discipline	Discount ≤ direct +1.0 pt	Discount discipline breaks
1	WhatsApp	Primary channel for three segments	Nurture → visit	Response latency	Day one	Never — but useless un-integrated
2	Meta	Volume engine for A and B; affinity reach for S3, S7	Reach → lead	CPQL	CPQL ≤ ₹7,889	CPQL > ₹10,576
2	Google Search	Intent capture — the highest-quality lead	Lead → qualified	CPQL, branded share	Branded share < 90%	—
2	Website + landing pages	The verification surface	Lead	LP conversion ≥ 6%	Day one	—
2	Outdoor	Local legitimacy at 25-acre scale	Reach	Recall, geo holdout	Phase 3 only	Cannot be held out
3	YouTube · SEO · Print · PR · Email	One specific job each, for one or two segments	Various	Assisted conversions	—	—
4	Property portals	Presence is mandatory; lead volume is not	Lead	CPQL	Capped ₹1.00 Cr	—
4	LinkedIn	S3 and S7 precisely, and nobody else	Reach	CPQL	Capped ₹0.50 Cr	—
5	Google Display prospecting	Cut. Inflates lead count, depresses lead-to-qualified	—	—	Retargeting only, ₹0.30 Cr	—
5	Influencers · off-site lead events · broad email acquisition	Cut or deferred. Unmeasurable before attribution exists	—	—	Phase 3, tracked links only	—

THE CORRECTION VERIFICATION FORCED ON MY OWN CHANNEL PLAN

Portals are the corridor’s dominant organic surface **and they are rented**. Capping portal spend only works **if owned branded search is defended at the same time** — otherwise capping the rented channel while leaving the owned one intercepted loses both.

Creative is the only lever that improves every downstream metric at once

It is not decoration and it is not a taste argument. **It is the one input that raises hook rate, lead quality, visit rate and close rate without buying more media.**

LINK IN THE CHAIN	WHAT CREATIVE DOES	METRIC	TARGET
Attention	Stops the scroll	Hook rate (3-sec / impression)	≥ 25%
		CTR	≥ 1.2%
Qualified demand	Attracts the right person, repels the wrong one	Landing-page conversion	≥ 6%
		CPQL by variant	≤ ₹7,889
Trust	Makes the claim checkable	Lead quality — % passing the cash gate	≥ 45%
Site visit	Converts interest into travel	Qualified-to-visit by creative	≥ 23%
Conversion	Arms the sales conversation	Booking by first-touch creative	Tracked

CREATIVE PILLARS – THREE TERRITORIES, TESTED NOT CHOSEN

Price-led — the ungated sheet. **Proof-led** — carpet area, handover dates, progress. **Density-led** — the arithmetic. **Twelve variants, three per audience, in Phase 0. The market decides which territory is right, not the room.**

THE DISCIPLINE THAT MAKES IT COMMERCIAL

A variant is judged on **cost per qualified site visit**, never on whether it is liked. **A variant above 2× the best variant’s CPQL is cut, regardless of who made it.** Fatigue is a trigger, not an opinion: frequency ceiling plus CPL drift >20% forces an automatic refresh.

WHERE I WOULD SPEND CREATIVE EFFORT FIRST

The landing page and the price sheet, because the boldest decision in the strategy is cheap to test: **gated versus ungated pricing**, two pages per audience, ₹2.5 lakh. If ungated wins on CPQL, the transparency position is validated commercially rather than argued.

ONE THING I WOULD FIX BEFORE ANY OF IT RUNS

The campaign’s signature claim — **fifteen to the acre** — is **false against two named villa competitors** unless bounded to all 25 acres, apartments included [S13]. And the two density comparators I would cite **have no published unit count.**
I would bound the claim and write the footnote before the first impression, not after the first challenge.

Sources [S13] – the competitor density evidence that bounds the claim Basis Derived. Targets are my proposal; the variant test is designed to replace them with observed values

Note Creative supports the strategy here. It is not the strategy

I would qualify on cash at purchase, and build the measurement before the media

Five of the six metrics I would read weekly **require CRM discipline that does not exist yet**. That makes the measurement system a pre-launch dependency, not a reporting task.

THE QUALIFICATION GATE

Cash at purchase, not income. ₹17.6 L for A rising to ₹74.1 L for D. Two households on identical incomes clear it differently.

- **Three required fields at capture:** budget band, timeline, and **country / origin district**
- Criteria **written down and owned by a named person** — today neither exists
- Origin district is free to collect and re-cuts the entire NRI budget at quarter two

NON-NEGOTIABLE ON DAY ONE

- **WhatsApp Business API integrated.** Un-integrated it is a liability, not a channel — conversation history cannot be reconstructed
- **First-touch attribution as a mandatory picklist**, with values that reconcile to the budget lines
- **A named CRM owner.** The CRM owns the lead-to-qualified rate, worth ₹17.2 Cr per point
- **A structured visit debrief** with a closed objection taxonomy — not a free-text box

WHERE MARKETING ENDS AND SALES BEGINS — AND THE ONE NUMBER THAT SPANS BOTH

THE HANDOVER RULE

Marketing owns everything up to the booked visit. Sales owns the visit onward. Both are read on the same number — site-visit-to-booking rate, weekly, by community and by consultant — **so neither can blame the other's stage.**

TWO STAGES THAT ARE CURRENTLY FICTIONAL

Consultation and negotiation are modelled but have no defined trigger. They sit inside aggregates, which means **the sales team's own contribution is invisible**. I would promote both to counted CRM gates before go-live. It costs nothing and it decomposes the model's most sensitive variable.

Basis Derived and recommended. Cash-gate figures are my calculation from the proposed ladder Requires validation What CRM exists today, who owns it, and whether WhatsApp is integrated
Determines Whether Phase 1 is four weeks or four months

Leading indicators release money. Lagging indicators confirm it was right

Every metric below names the decision it triggers. **A metric that cannot change a decision is not on this dashboard** — which is why impressions, reach, followers and page views appear nowhere.

LEADING — READ WEEKLY, AND THESE RELEASE THE NEXT TRANCHE

Metric	Formula	Target	Triggers
CPQL	Media ÷ qualified leads	₹7,889 <i>max ₹10,576</i>	Campaign optimisation; tranche release
Cost per qualified site visit	Media ÷ visits held	₹33,676 <i>max ₹45,144</i>	The Phase 0 decision metric
Site-visit-to-booking	Bookings ÷ visits held	≥ 6.9%	The single most important number
CPL	Media ÷ leads	₹1,247 <i>max ₹1,672</i>	Channel reallocation
MQL rate · lead-to-visit	Stage ÷ prior stage	45% · 23.4%	Qualification criteria
Site-visit velocity	Visits held per week	≥ 15	Capacity and staffing
Show rate	Held ÷ booked	≥ 60%	Confirmation process
Follow-up latency	Hours from visit to contact	< 24h	Coaching
CTR · CPC · hook rate	Platform	≥1.2% · — · ≥25%	Creative refresh
Creative fatigue	CPL drift vs 30-day baseline	< 20%	Automatic refresh

LAGGING — READ MONTHLY OR QUARTERLY; THESE CONFIRM, THEY DO NOT STEER

Metric	Formula	Target	Owner
CAC	Total acquisition ÷ net units	₹8.44 L <i>max ₹11.32 L</i>	CFO
ROMI	(Gross profit – marketing) ÷ marketing	≥ 3.0×	CFO
Cost per booking	Media ÷ bookings	₹4.90 L	Marketing lead
Revenue recognised	Net units × achieved ticket	₹506.7 Cr	CFO
Gross profit	Revenue × margin	₹141.9 Cr @28%	CFO
Marketing as % of GDV	Opex ÷ GDV	4.70%	CFO
Achieved price vs list	Achieved ÷ list, by community	≥ 95%	CEO
Cancellation rate	Cancelled ÷ gross bookings	≤ 8%	Sales
Referral rate	Referrals per owner-year	≥ 0.15	Marketing lead
ROAS <i>(media only)</i>	Revenue ÷ media	Diagnostic only	Never a decision metric

WHICH METRICS GATE THE MONEY

Only the leading column releases a tranche. By the time CAC and ROMI are readable, the money is spent. **Phase 0 and Phase 2 gates are set on CPL, CPQL and cost per qualified site visit**, because those are the numbers a quarter can actually produce.

Basis Derived. Targets are calculated from the modelled funnel; ceilings from a 30%-of-gross-profit policy Requires validation Historical CPL, CAC and cancellation rate — each would replace a target with an observation Rule Compare within a layer, never across

A validation tranche — not a small version of the campaign

Eight weeks: two setup, six live. **The distinction matters: a miniature campaign is judged on results; a validation tranche is judged on what it settles.**

	AMOUNT	CHANNEL / ITEM	WHAT IT ANSWERS
Media	₹18.00 L		
	₹6.30 L	Meta — 6 variants	Volume audiences; establishes the CPL floor
	₹5.40 L	Google Search — 3 ad groups	Intent capture; tests branded defence
	₹3.60 L	LinkedIn — S3 diaspora	The most expensive audience — is it viable at all?
	₹1.80 L	One portal	Rented vs owned demand
	₹0.90 L	YouTube retargeting	Cheapest re-engagement
Non-media	₹7.00 L		
	₹2.50 L	Landing pages, 2 per audience	Gated vs ungated price sheet
	₹2.20 L	12 creative variants	Price / proof / density territory
	₹1.50 L	Tracking + CRM setup	Without this the test measures nothing
	₹0.80 L	Analyst time	Weekly readout

WHAT THE SAMPLE CAN AND CANNOT SUPPORT

METRIC	EVENTS	95% CI	VERDICT
CPL	1,443	±5.2%	Measurable
Lead → qualified	1,443	±12.3%	Measurable
CPQL	228	±13.0%	Measurable
Qualified → visit	228	±30.9%	Directional
Cost per qualified site visit	53	±26.8%	Directional
Cost per booking	3.7	±102%	NOT MEASURABLE

THE MEASUREMENT DECISION I WOULD STATE IN ADVANCE

A ₹25 lakh test cannot establish a booking rate. Measuring site-visit-to-booking to ±25% would need ~832 held site visits — roughly 22 months of continuous spend.

So the test is judged on cost per qualified site visit. Booking rate is carried as a stated assumption and monitored as a secondary indicator across the first two quarters of live trading.

Saying that now is the difference between a measurement exercise and a soft launch that quietly becomes the launch.

KILL AND SCALE CRITERIA — AGREED BEFORE THE MONEY MOVES, NOT AFTER THE RESULT

SCALE CPL ≤ ₹1,550 and CPQSV ≤ ₹42,000 → release Phase 1 in full	PARTIAL CPL ₹1,550–1,900 → release Phase 1 at 70%; re-test the two weakest audiences	KILL CPL > ₹1,900 → stop and re-base. Do not proceed at reduced scale	KILL CPQSV > ₹52,000 → stop. The funnel is broken, not the media	CUT Audience > 2× best → remove that audience from the launch plan	ADOPT Ungated ≥ gated → publish pricing ungated. The position is validated commercially
--	---	---	--	--	--

Basis Derived. Volumes from the modelled funnel; confidence intervals calculated on those volumes Method Poisson relative CI for counts; normal approximation for proportions Ask ₹25 lakh — approximately 1% of the envelope, released against a written stop condition

₹31.75 crore is not a marketing budget — it is four kinds of money under one label

This is the single most important correction in the deck. **Presented as one number it reads reckless; separated properly it is an ordinary regional budget with two capital items attached.**

CATEGORY	AMOUNT	SHARE	WHAT IT ACTUALLY IS, AND WHOSE P&L IT BELONGS IN
Total commercial budget	₹31.75 Cr	100%	The planning ceiling — not the ask
True marketing OPEX	₹23.80 Cr	75.0%	The only line a marketing lead should be accountable for → <i>marketing</i>
— of which media	₹14.65 Cr	46.1%	62% of opex · ₹32.6 lakh a month across 45 months → <i>marketing</i>
— of which agency, content, tech, research	₹9.15 Cr	28.8%	People, production, platforms, validation → <i>marketing</i>
Cost of sale	₹4.04 Cr	12.7%	Channel-partner commission and referral — paid only on performance → <i>sales</i>
Sales infrastructure capex	₹3.15 Cr	9.9%	A building. An asset, amortised → <i>capex</i>
Technology capex	₹0.76 Cr	2.4%	A system. An asset, amortised → <i>capex</i>
Contingency reserve (<i>inside opex</i>)	₹1.90 Cr	8.0% of opex	Finance-held, not marketing-held. Released on a named event only → <i>finance</i>

₹23.80 + ₹4.04 + ₹3.15 + ₹0.76 = ₹31.75 Cr. The reserve sits inside the ₹23.80 Cr opex, alongside a ₹21.90 Cr deployable core.

Basis Derived calculation on stated assumptions. Reclassification is mine; no vendor quote underlies any line Not a KMV figure No estimate is offered anywhere for KMV’s actual budget, spend, headcount or historical CPL — none was available Requires validation Internal team structure, agency contracts, and whether the sales office is capex or leased

₹6.33

LAKH · PER UNIT

Marketing opex per unit once reclassified

₹8.44

LAKH · PER UNIT

All-in acquisition cost (CAC), every category included

THE CONVERGENCE THAT TELLS ME THE RECLASSIFICATION IS RIGHT

Two corrections arrived at independently land on the same number. **Stripping cost of sale and capex out gives ₹6.33 lakh per unit. The allowable ceiling the analysis had set for itself was ₹6.30 lakh.** A 0.5% difference.

Put the other way: **the overshoot against the allowable is ₹8.06 crore, and the misclassified money is ₹7.95 crore. They are the same ₹8 crore.**

AND THE CORRECTION THAT RAISES THE NUMBER, WHICH I WOULD RATHER BRING THAN HAVE FOUND

The model carries agency fees and no internal marketing headcount. I have not invented KMV’s team size — no such information was available. But the line cannot be zero.

Adding a labelled range for two people over the window takes the envelope up, not down: ₹25.33-26.86 Cr of marketing opex, ₹33.28-34.81 Cr all-in, CAC ₹8.85-9.26 L. Both ends stay inside a 30%-of-gross-profit ceiling.

The envelope is a planning ceiling. Only ₹25 lakh is an ask

I would not release ₹23.80 crore against a forecast. I would release it in six tranches, each against a KPI gate, a named decision-maker and a written stop condition.

Phase 0 • Validation 2 months		₹0.25 Cr · 1.0%
Phase 1 • Launch prep months 3–6		₹2.60 Cr · 10.9%
Phase 2 • Market entry months 7–15		₹4.20 Cr · 17.6%
Phase 3 • Scale months 16–30		₹8.10 Cr · 34.0%
Phase 4 • Optimise months 31–42		₹5.05 Cr · 21.2%
Phase 5 • Clearance months 43–51		₹1.70 Cr · 7.1%
Contingency reserve CFO-held		₹1.90 Cr · 8.0%

Deployable core ₹21.90 Cr (92.0%) + reserve ₹1.90 Cr (8.0%) = ₹23.80 Cr marketing opex. Before the internal-team line on slide 17.

1.0

% OF OPEX

What I am actually asking for today — ₹25 lakh, and 0.8% of the ₹31.75 Cr headline

THREE RULES ACROSS EVERY TRANCHE

- **A saving is never banked.**
Underspend moves to the highest-leverage stage — the site visit
- **A missed gate cuts inventory before it cuts price, and cuts inventory before it raises budget**
- **A gate missed twice consecutively releases nothing**, regardless of explanation

WHY THIS IS STRATEGICALLY SAFER THAN APPROVING THE TOTAL

- **The largest risk is not overspending — it is spending correctly against a wrong price assumption.** A tranche structure detects that in weeks, not at year end
- Only **₹14.65 Cr is genuinely variable.** Outdoor, print, retainers and CRM are fixed or contracted once committed — **so a mid-flight 30% cut lands almost entirely on the one line that generates leads**
- Which is an argument for committing to outdoor and print *later* — not for cutting media *first*

Basis Derived. Tranche sizes, windows and gates are my recommendation Governance Phase 0 and 4–5 at marketing level with CFO notified; Phases 1–3 require CEO + CFO

Status A controlled investment framework, not a commitment

Three reading rules, in the reporting template before the first review

Attribution arguments are always won by whoever wrote the template. **I would write it before the spend, not when the spend is challenged.**

RULE 1 · COMPARE WITHIN A LAYER, NEVER ACROSS

Judging brand against performance on cost per booking **defunds ₹10.25 crore of the highest-value spend.** It is the most common way a sound budget is destroyed by a reasonable-sounding question.

RULE 2 · JUDGE DEMAND GENERATION ON CPQL

Not CPL. **Cheap leads that fail the cash gate are a cost, not a result.** Reporting CPL as the headline optimises the media buy against the business.

RULE 3 · JUDGE BRAND, OUTDOOR AND THE SITE ON HOLDOUTS

First-touch and geo holdouts — never last click. Last click will always find in favour of the search line and against everything that made the search happen.

THE ATTRIBUTION MODEL I WOULD INSTALL

LAYER	ATTRIBUTION METHOD	WHY
Performance media	First-touch, mandatory CRM picklist	The check on ₹9.84 Cr of allocation. Values must reconcile to the budget lines
Brand, outdoor, OTT, print	Geo or time-based holdout, agreed in advance	Cannot be defended under click reporting and will be the first line cut in a bad quarter
Referral and channel partner	Source field at booking + discount register	Referral is the cheapest revenue in the model; it must not be mis-credited to media
Site and experience centre	Visit debrief, by consultant	The ₹39.4 Cr-per-point stage. Unmeasured from day one, it stays unmeasured

WHAT I WOULD REPORT, AND WHAT I WOULD REFUSE TO REPORT

Report revenue at risk, not spend efficiency. “CPL improved 12%” is not a result. **“Site-visit conversion moved 0.4 points, worth ₹15.8 crore”** is.

Deliberately absent from every report: impressions, reach, followers, page views. None of them can change a decision, and each of them can be used to defend a bad quarter.

AND THE HONEST CAVEAT ON ROI

Revenue ÷ spend would read 16.0x. It is meaningless — most of that revenue pays for land, construction and finance. **Any development deck showing 16x should be disbelieved, including this one.**

ROMI here is (gross profit – marketing) ÷ marketing: 3.47x at an assumed 28% margin — 2.99x at 25% and 3.95x at 31%. The margin is a placeholder, because no construction cost data exists anywhere behind this work, **so the ROMI figure moves 32% across a range nobody has tested.**

Basis Recommended. The ₹10.25 Cr and ₹39.4 Cr figures are derived from the modelled funnel Requires validation A 28% gross margin – the single largest unvalidated input in the entire model

Rule Attribution method is agreed before the spend, never after the challenge

The decision, and what would change it

Thirty-six gaps across twelve domains — and eighteen close for ₹41.5 lakh

Prioritised by **impact × urgency ÷ effort**. Eleven of the first thirteen actions cost nothing at all — they are decisions, not budgets.

FREE — DO THESE BEFORE ANY MONEY COMMITS

DOMAIN	ACTION	WHAT IT SETTLES
Brand	Consolidate domain and social identity	Splits authority every day it waits
Measurement	Reconcile every published project figure	A transparency launch over contradictory numbers
CX	Reverse the site photography restriction, publicly	A live review complaint that contradicts the position
Content	Bound the density claim and write the footnote	The campaign’s central claim
Attribution	Specify first-touch, consultation and negotiation as CRM events	₹9.84 Cr of allocation, and a diagnosable funnel
CRM	Name the CRM owner; write the qualification criteria	₹17.2 Cr per point
Performance	Put the three reading rules in the reporting template	₹10.25 Cr of defensible spend

PAID — ₹41.5 LAKH TOTAL, AND IT BUYS EVIDENCE, NOT MEDIA

ACTION	COST	WHAT IT SETTLES
IGRS registration series, 24 months, two mandals	₹2.5 L	Up to ₹50.7 Cr of price risk
Segment sizing from registration and institutional data	₹4.0 L	Six of eight segments
Competitor velocity in the ₹2.2–2.8 Cr band, 8 weeks	₹3.5 L	₹158.8 Cr — the largest open question
30–40 depth interviews + landowner families	₹12.0 L	The behavioural attributes of all eight segments
Paid media test across four community audiences	₹17.5 L	The CPLs underwriting ₹11.02 Cr
Twenty proxy visits on an existing project	₹2.0 L	₹12.63 Cr of Community B budget
Total	₹41.5 L	= 1.3% of the ₹31.75 Cr planning envelope

THE HONEST FRAMING

₹41.5 lakh does not de-risk ₹158.8 crore. It tells you whether ₹158.8 crore is real *before* you spend ₹31.75 crore finding out.

Those are different claims and only the second one is honest.

Basis Derived. Every cost is my assumption; a quote would replace it Overlap The ₹17.5 L media test is the media component of the ₹25 lakh validation tranche on slide 16

Sequence Free actions first, then the paid ones, then any launch commitment

Ten risks — each with an early signal that fires without a meeting

The two critical risks are both pricing risks, and neither is a marketing risk. That is the honest hierarchy: the largest threats sit above the marketing function, and marketing’s first job is to detect them cheaply.

RISK	TIER	EARLY SIGNAL	MITIGATION / KILL TRIGGER
1 The price ladder does not clear — a 50% premium to the locality asking average, untested	CRITICAL	Achieved sits >12% below list in any band	Test before Phase 1. Re-cut that band
2 The ₹2.2-2.8 Cr band is thin — ₹268 Cr of the plan sits in it	CRITICAL	Competitor absorption < 1.5 units/month	Re-cut D toward C before launch
3 CPL is materially worse than assumed — the media line is derived, never quoted	High	Observed CPL >30% above assumption	Stop and re-base. Not reduced scale
4 Conservative scenario materialises — CAC at 46.3% of gross profit	High	CAC > ₹11.32 L for two quarters	Halt tranche release
5 Lead quality collapses — volume holds, cash-gate pass rate falls	High	Lead-to-qualified drifts below 12%	Tighten qualification and creative, not media spend
6 Sales follow-up fails — the highest-leverage stage is not marketing-controlled	High	Follow-up latency > 24h; show rate < 60%	Coaching and confirmation process, weekly by consultant
7 Over-dependence on paid media — only ₹14.65 Cr is genuinely variable	Medium	Referral below 0.15/owner-year at Phase 4	Cap outdoor and print until Phase 3
8 The brand credential cannot be documented at the scope implied [S05][S17]	Medium	No work order produced on request	Fall back to density arithmetic and ungated pricing — both provable without credentials
9 Attribution never gets installed — spend without learning	Medium	Phase 1 gates are binary	No CRM, no Phase 2
10 Budget leakage — discounting by channel partners erodes achieved price	Medium	Partner discount > direct +1.0 pt	Discount register reviewed monthly; partner termination

Sources [S05] [S17] for risk 8; all others derived from the model Basis Derived. Tiers and triggers are my assessment Design principle A register whose entries need a judgement call under stress is a list, not a control

What changes quarter by quarter — and what the mix looks like at each stage

Year one is not steady state. Referral requires prior owners, and in year one there are none — so year one must carry more demand generation than the 45-month average implies.

STAGE	MONTHS	WHAT THE MARKETING FUNCTION IS DOING	MIX	LEADING METRIC	CUMULATIVE RELEASE
Validate	1–2	Discover the economics. Twelve creative variants, four audiences, five channels	100% test media	Cost per qualified site visit	₹0.25 Cr
Build	3–6	CRM, attribution, website, price sheet, first show home, sales training	0% media	Binary readiness gates	₹2.85 Cr
Enter	7–15	Controlled launch. Digital performance only; two outdoor boards	~70% digital	Bookings; CPL vs Phase 0	₹7.05 Cr
Scale	16–30	Full mix unlocks. Outdoor, print, OTT, PR added on validated economics	~55% digital, 25% brand	Site-visit-to-booking	₹15.15 Cr
Compound	31–42	Referral and owner community take share from paid; CAC should fall	~40% digital, rising referral	CAC quarter on quarter	₹20.20 Cr
Clear	43–51	Residual inventory. Retargeting, partners, resale, owner referral	Mostly earned	Inventory < 15%	₹21.90 Cr

COMMUNITY SEQUENCING

C first, then D, then A, then B. C is the lowest-risk business in the portfolio and it proves the site. D needs seeded buyers before its first visit converts. **B is last because its capability must be piloted first.**

THE YEAR-ONE CORRECTION

The model assumes **18.5% referral across the whole period.** That is structurally back-loaded. I would model referral **ramping from ~0% in year one** rather than flat — and fund year one accordingly.

WHAT RE-BASES THE ROADMAP

A failed Phase 0. A price test that comes back >12% below list. A construction timeline that moves. **The roadmap is a sequence of gates, not a calendar commitment.**

Basis Derived. The 45-month window follows from 376 units at the modelled velocity Requires validation Construction and handover milestones, and approvals status

Note Sequencing is my recommendation; it is not a KVM release plan

The diagnostic that tells you *which* problem you have

Every funnel number falls into one of five states. **Each state has one correct response, and three incorrect ones that all look reasonable in a meeting.**

CPQL within target AND qualified site visits healthy AND sales follow-up SLA met	→ Increase spend. Release the next tranche
CPL is good but CPQL is poor	→ You are buying the wrong people. Fix targeting, qualification criteria and creative — not budget
CPQL is good but site visits are poor	→ The offer or the process is failing. Fix scheduling, follow-up, trust and the reason to travel
Site visits are strong but bookings are weak	→ This is not a marketing problem. Investigate pricing, product, sales capability and the offer
Everything is weak	→ Stop. The model is wrong, not the execution. Re-base before spending more

THE GOVERNANCE LOOP

CADENCE	WHO IS IN THE ROOM	WHAT IS DECIDED
Weekly	Marketing + Sales Head	CPQL, cost per qualified site visit, visit-to-booking, follow-up latency. Channel and creative reallocation
Monthly	Marketing + Sales + Finance	CAC, conversion by source and community, discount register, cancellation. Inventory release
Quarterly	CEO + CFO + Marketing	Gate pass/fail, ROMI, envelope review. Tranche release — or halt

WHO OWNS WHAT

FUNCTION	OWNS	IS MEASURED ON
Marketing	Everything up to the booked visit	CPQL · cost per qualified site visit
Sales	The visit onward	Site-visit-to-booking , by consultant
CRM	Lead-to-qualified rate	Data quality; attribution completeness
Channel partners	28% of bookings, paid on performance	Bookings and discount discipline
Finance	The reserve and the gates	CAC ceiling; tranche release
Management	Price, product, inventory release	Achieved price vs list

THE RULE THAT MAKES THIS WORK

Marketing and sales are read on the same number — site-visit-to-booking, weekly, by community and by consultant — **so neither can blame the other’s stage.**

I would not release the full investment upfront

Not because the number is wrong. **Because releasing it against a forecast, rather than against evidence, is the avoidable risk in a ₹500 crore project.**

MY RECOMMENDATION	
1	Establish a planning envelope — ₹23.80 Cr of marketing opex, rising to ₹25.33-26.86 Cr once an internal team line is added. Book cost of sale and capex separately
2	Validate with ₹25 lakh — about 1% of the envelope — with the kill condition agreed in advance
3	Measure CPL, CPQL and cost per qualified site visit. Not cost per booking — the sample cannot support it
4	Validate audience, proposition and channel fit across four community audiences and three creative territories
5	Release budget in tranches — six of them, each against a KPI gate with a named decision-maker
6	Scale only when the gates are achieved. A missed gate cuts inventory before it raises budget
7	Keep the reserve under finance control — ₹1.90 Cr, released on a named event only
8	Reallocate continuously on marginal return , comparing within a funnel layer and never across

₹25

LAKH · RELEASED NOW

The ask. 1.0% of the marketing opex envelope, 0.8% of the ₹31.75 Cr headline

₹23.80

CRORE · PLANNING ENVELOPE

Not a commitment. A ceiling under governance, released in six gated tranches

WHAT I WOULD ASK YOU TO JUDGE

Not whether the numbers are right — **most of them are labelled assumptions and I have said so on every slide.**

Whether the framework protects the capital. If a quarter goes badly, you would know within weeks rather than at year end, and the response is written down before the money moves.

AND WHAT THIS DECK DOES NOT CLAIM

No estimate of KMV’s actual marketing budget, spend, headcount, historical CPL, sales velocity or inventory position appears anywhere. None was available.

No industry benchmark has been manufactured. Where a published rate exists it is cited; where none exists, a range is labelled as an assumption.

The revenue base itself is unproven. A 50% premium to the locality asking average sits underneath every figure here. If it does not hold, this entire strategy re-bases.

IN CLOSING

Marketing investment should be earned by performance, not committed by forecast.

This strategy is intentionally designed as a ~~decision framework~~, not a ~~fixed media plan~~. The objective is to validate the market, earn the right to scale, and connect every additional rupee of marketing investment to a measurable commercial outcome.

Kiran Basa

ASSIGNMENT

Marketing Strategy — KMV Spaces,
Amaravati / Mangalagiri

SUBMITTED TO

Mr. Anudeep

The working papers

Seven appendices: assumptions, pricing evidence, competitor evidence, the budget model, KPI definitions, the full source register, and what this research could not establish.

Assumptions register

Every number in this deck that is not sourced. **Each one requires KMV validation, and each names what would replace it.**

	ASSUMPTION	VALUE USED	LABEL	WHAT WOULD REPLACE IT
A1	Unit count on 25 acres	376 units · 15.0/acre	Derived	A masterplan and approvals
A2	Community mix	A 169 · B 84 · C 60 · D 63	Derived	A product decision
A3	Price ladder	₹5,150 / 5,700 / 6,500 / 7,200 per sq ft	Derived from researched competitor tickets	IGRS registration data, 24 months
A4	Blended realisation	₹6,098/sq ft	Derived	As above
A5	Revenue	₹506.7 Cr	Derived	As above
A6	Development gross margin	28%	Working assumption — a placeholder	Contractor quotations. No cost data exists anywhere behind this work
A7	Sell window	45 months <i>(51 including clearance)</i>	Working assumption	Construction and handover milestones
A8	Cost per lead	₹1,247 blended	Derived from the media assumption	24 months of historical lead data
A9	Lead → qualified	15.81% compound <i>(45% × 55% × 63.9%)</i>	Working assumption — a decomposition	90 days of CRM data
A10	Qualified → site visit held	23.4%	Working assumption	As above
A11	Site-visit show rate	60%	Working assumption	As above
A12	Site visit → booking	6.9%	Working assumption	Two quarters of live trading — not a ₹25 lakh test

	ASSUMPTION	VALUE USED	LABEL	WHAT WOULD REPLACE IT
A13	Source mix	53% marketing · 28% channel partner · 19% referral	Working assumption	First-touch attribution field
A14	Cancellation rate	8%	Working assumption — the model originally had none	Historical cancellation data. Moves revenue by ₹40.5 Cr
A15	Reach	6,573,000	Working assumption — an output of the lead rate, not an input	Platform reach data once live
A16	Marketing opex	₹23.80 Cr	Derived by reclassifying the ₹31.75 Cr model	A committee decision on the envelope
A17	Internal marketing team	₹1.53–3.06 Cr over the window	Working assumption — a range, not a quote	KMV's actual team structure and payroll
A18	Performance agency fee	12% of digital media	Working assumption	An agency contract
A19	Referral rate	18.5% of bookings, flat	Working assumption — structurally back-loaded	Should be modelled ramping from ~0% in year one
A20	Segment sizes and behaviour	Eight segments, scored	Working assumption throughout	Primary buyer research. None exists

THE FIVE THAT WOULD CHANGE THE STRATEGY IF WRONG

A6 (gross margin) — every ROI figure rests on it. **A3/A4 (the price ladder)** — a 50% premium to the locality asking average, untested. **A12 (visit-to-booking)** — ₹39.4 Cr per point. **A14 (cancellation)** — ₹40.5 Cr. **A20 (segments)** — the entire targeting plan.

Pricing evidence

How every ₹/sq ft figure was derived, the external benchmark it was tested against, and the exposure that testing revealed.

THE METHOD

Published locality averages for this micro-market disagree by up to 40%. So every rate here is derived as **published ticket price ÷ published unit size**, for named projects. **Seven of the eight projects publishing both ends of a range agree internally within 0.7%**, which is why derived bands are preferred over any locality average.

REFERENCE POINT	₹/SQ FT	TYPE	SOURCE
Mangalagiri locality average, asking <i>(Sept 2025)</i>	4,062	Portal	[S11]
Mangalagiri, June 2025	4,098	Portal	[S11]
Wider micromarket, Mar 2025	4,805	Portal	[S11]
Wider micromarket, Dec 2025	5,489	Portal	[S11]
SLV Amaravathi Pride	4,210	Portal, project-level	[S15]
Manjeera Monarch — delivered comparable	5,100	Portal, project-level	[S12]
Prime Grandeur	5,394–5,403	Portal, project-level	[S13]
IJM Villas 64	10,143	Portal, project-level	[S13]
— This plan, blended	6,098	Derived calculation	—

WHAT THE COMPARISON SAYS

The plan asks a 50% premium to the Mangalagiri locality average and 11% to the wider micromarket.

COMMUNITY A IS THE EXPOSURE NOBODY FLAGGED

At ₹5,150/sq ft, Community A prices **above a delivered apartment comparable at ₹5,100** in the same locality [S12] and 27% above the locality

That is not automatically wrong — a 15-per-acre scheme with villas *should* price above a locality average dominated by towers. **But the premium had never been sized before, and it is the largest commercial assumption in the project.**

average.

A is 169 units — 45% of the scheme — and the community least able to command a premium, because a garden apartment competes directly on rate.

AND A FINDING THAT POINTS THE OTHER WAY

KMV Vivaan asks **₹3.59 Cr (Phase I) and ₹5.21 Cr (Phase II)** [S14]. If those clear, Community D at ₹2.30–2.74 Cr sits **below the developer's own achieved range** — and may be under-priced.

These two observations point in opposite directions, and both are testable from data KMV already holds. Note also that Vivaan is at Poranki / Penamaluru, east Vijayawada — **not on the corridor**, so it is a pricing reference, not a location comparable.

The caveat that governs this entire appendix: every price above is an asking price. No transaction or registration data was obtained. IGRS AP registration data for Mangalagiri and Thullur mandals — a 24-month series — is the single highest-value missing source behind this work, and it would settle up to **₹50.7 crore** of price risk for about ₹2.5 lakh.

Competitor evidence

The screen, the field, and the three claims that did *not* survive it.

PROJECT	DEVELOPER	SCALE · DENSITY	PRICE EVIDENCE	POSITIONING	WEAKNESS	SOURCE
Raintree Park Dwaraka Krishna	IJM Lingamaneni (IJM + LEPL)	120 ac · ~3,300 planned	Apartments ~₹3,900/sq ft; villas to ₹10,143	“International class integrated township”	Has the full ladder and never markets it as one — five names, 18 years	[S13]
IJM Villas 64	IJM Lingamaneni	33.69 ac · 64 villas · 1.9/acre	From ₹3.75 Cr	“A private enclave of just 64 homes”	₹3.75 Cr floor excludes almost the whole corridor buyer base; no proof layer	[S13]
Prime Grandeur	Prime Constructions	10 ac · 119 villas · 11.9/acre	₹1.34–1.82 Cr · ₹5,394–5,403/sq ft	Mid-premium villa living, value-led	The most direct competitor. No delivery evidence published	—
Manjeera Monarch	Manjeera Constructions	Apartments · 113/acre	₹5,100/sq ft — delivered	Amenity-led apartments	Documented carpet-area complaint; developer satisfaction described as very low	[S12]
Srivalli Pravas	Undavalli Constructions	2BHK to duplex on one site	—	“Luxury apartments”	Has stumbled into a ladder without articulating it	—
Jayabheri The Capital	Jayabheri Group	—	—	Amenity-led	Returned no search result at all — and it anchors a density comparison	Gap
Grand Project Capitol	Kalidindi Real Konsult	95.4/acre	—	“68% open spaces, only 32% construction”	Open ground, but not a low-density community	—
Aparna Amaravati One	Aparna Constructions	612 units, ~30% occupied	Below the target band	Ready gated community	A gated community two-thirds empty is not a community	—
TAG AIRA · KMV Vivaan · CRDA plots	Various	—	Vivaan ₹3.59–5.21 Cr	Smart homes · villas · land	Sub-scale, off-corridor, or a different product	[S14]

THREE CLAIMS THAT DID NOT SURVIVE THE EVIDENCE

“The corridor’s largest project” — false. Raintree Park is 120 acres.

“The lowest density in the corridor’ — false. IJM Villas 64 runs 1.9/acre; Prime Grandeur 11.9 [S13]. The defensible formulation is narrower: *the lowest density for a community that includes apartments*, bounded to all 25 acres.

“The only large villa community” — false. Prime Grandeur has 119 villas; Raintree Park Phase 1 delivered 116.

Two limits on this appendix. Densities are derived from published acreage ÷ published unit counts *where both exist* — for two comparators they do not, so the density claim on slide 13 must be footnoted rather than asserted. And **no velocity or absorption data was obtained for any competitor**, because the RERA tier returned nothing.

Detailed budget model

The full line-item build, the reclassification that separates four kinds of money, and the tranche schedule.

THE RECLASSIFICATION — WHY ₹31.75 CR IS NOT A MARKETING BUDGET

CATEGORY	AMOUNT	% OF TOTAL	NATURE	WHOSE P&L
TOTAL COMMERCIAL BUDGET	₹31.75 Cr	100%	A planning ceiling, not an ask	—
True marketing OPEX	₹23.80 Cr	75.0%	Operating expense	Marketing
Cost of sale	₹4.04 Cr	12.7%	Channel-partner commission + referral — paid only on performance	Sales
Sales infrastructure capex	₹3.15 Cr	9.9%	A building — an asset, amortised	Capex
Technology capex	₹0.76 Cr	2.4%	A system — an asset, amortised	Capex

INSIDE THE ₹23.80 CR OF MARKETING OPEX

LINE	AMOUNT	% OF OPEX	FIXED / VARIABLE	CONTROLLABLE?	KPI
1 Digital performance media	₹9.84 Cr	41.3%	Variable	Partly — the auction price is not	CPQL, CPSV
2 Outdoor (OOH)	₹2.13 Cr	8.9%	Fixed once committed	No — contracted	Recall, geo holdout
3 Content production	₹2.44 Cr	10.3%	Semi-fixed	Yes	Hook rate, CPQL by variant
4 Performance agency fee	₹1.18 Cr	5.0%	Variable with media	Yes	Blended CPQL vs target
5 Events / experiences	₹1.17 Cr	4.9%	Semi-fixed	Yes	Site visits generated
6 Print	₹1.17 Cr	4.9%	Fixed per insertion	No — rate card	Recall, holdout

	LINE	AMOUNT	% OF OPEX	FIXED / VARIABLE	CONTROLLABLE?	KPI
7	NRI infrastructure	₹1.05 Cr	4.4%	Semi-fixed	Yes	B's qualified-to-visit rate
8	Telugu OTT + YouTube brand	₹0.99 Cr	4.2%	Variable	Yes	Assisted conversions
9	Brand agency retainer	₹0.81 Cr	3.4%	Fixed	Yes	Output SLA
10	PR	₹0.75 Cr	3.2%	Fixed	Partly	Earned coverage
11	Collateral + sales training	₹0.47 Cr	2.0%	Semi-fixed	Yes	Site-visit-to-booking
12	Launch digital burst	₹0.40 Cr	1.7%	Variable	Yes	Launch-window CPQL
13	CRM / marketing automation	₹0.33 Cr	1.4%	Fixed	Yes	Lead-to-qualified rate
14	Technology (<i>opex</i>)	₹0.33 Cr	1.4%	Fixed	Yes	LP conversion rate
15	Brand identity + design system	₹0.30 Cr	1.3%	Fixed, one-time	Yes	Delivery milestone
16	Channel / broker enablement	₹0.16 Cr	0.7%	Semi-fixed	Yes	CP bookings, discount discipline
17	Research & experiments	₹0.25 Cr	1.1%	Variable	Yes	Gate pass / fail
18	Internal team	₹1.53–3.06 Cr	6–11%	Fixed	Yes	Working assumption — a range, not a quote
19	Contingency reserve	₹1.90 Cr	8.0%	—	No — finance-held	Released on a named event only

	AMOUNT	NOTE
MEDIA total	₹14.65 Cr	62% of opex · 46% of the total commercial budget · ₹32.6 lakh a month across 45 months
NON-MEDIA total	₹9.15 Cr	Plus the internal-team range
REVISED ENVELOPE (<i>with internal team</i>)	₹25.33–26.86 Cr	All-in ₹33.28–34.81 Cr · CAC ₹8.85–9.26 L · both ends inside the 30%-of-gross-profit ceiling

TRANCHE SCHEDULE

Phase	Release	% OPEX	Cumulative	Gate
0 • Validation	₹0.25 Cr	1.0%	₹0.25 Cr	CPL ≤ ₹1,550 · CPQSV ≤ ₹42,000
1 • Launch prep	₹2.60 Cr	10.9%	₹2.85 Cr	CRM live · attribution mandatory · WhatsApp integrated · figures reconciled
2 • Market entry	₹4.20 Cr	17.6%	₹7.05 Cr	≥ 55 bookings · CPL within +25% · show rate ≥ 60%
3 • Scale	₹8.10 Cr	34.0%	₹15.15 Cr	V2B ≥ 5.5% over two quarters · CAC ≤ ₹9.5 L
4 • Optimise	₹5.05 Cr	21.2%	₹20.20 Cr	Referral ≥ 0.15/owner-year · CAC falling QoQ
5 • Clearance	₹1.70 Cr	7.1%	₹21.90 Cr	Inventory < 15% · referral ≥ 25% of bookings
Deployable core	₹21.90 Cr	92.0%		—
Contingency reserve	₹1.90 Cr	8.0%		Finance-held. Named event only
MARKETING OPEX	₹23.80 Cr	100%		<i>before the internal-team line</i>

COMMUNITY ALLOCATION

	A	B	C	D
Marketing opex	₹4.26 Cr (17.9%)	₹9.47 Cr (39.8%)	₹3.78 Cr (15.9%)	₹6.28 Cr (26.4%)
Opex per unit	₹2.52 L	₹11.28 L	₹6.31 L	₹9.97 L
As % of its own revenue	3.38%	8.42%	3.47%	3.96%
Target CAC	₹3.4 L	₹15.0 L	₹8.4 L	₹13.3 L

Allocation principle. Directly attributable costs are traced — performance media by community, the agency fee pro-rata, and the NRI infrastructure that serves B alone. **Everything shared is allocated by revenue share**, because the brand, the site, the technology and the launch serve all four. Allocating by unit count instead would load Community A with 45% of the shared cost for 25% of the revenue.

Conservative — 194 net units, ₹240.9 Cr, CAC ₹16.09 L, ROMI 1.16×, **CAC at 46.3% of gross profit.** This breaches the policy ceiling and should not be funded as planned.

Base — 346 net units, ₹466.2 Cr, CAC ₹9.23 L, ROMI 3.09×. **Note this is ₹40.5 Cr below the ₹506.7 Cr plan target, because cancellation was never modelled.**

Upside — 572 net units, ₹793.6 Cr, CAC ₹5.66 L, ROMI 5.86×.

Margin sensitivity, base case: ROMI reads **2.99× at a 25% gross margin, 3.47× at 28% and 3.95× at 31%** — a 32% swing on an assumption nobody has tested. **Break-even is the statement that survives it: 94 / 84 / 76 bookings of 376.**

The spread between conservative and upside is ₹552.6 crore — 109% of the base case. Establishing which world this is, is what the ₹25 lakh buys.

KPI definitions

Every metric used in this deck, with its formula and its target. **Targets are derived from the modelled funnel; ceilings are derived from a 30%-of-gross-profit policy, not from an industry norm.**

Metric	Formula	Target	Ceiling	Reads as
Reach	Unique individuals exposed	6,573,000	–	DERIVED an output, not an input
Impressions	Total ad deliveries	Not targeted	–	Diagnostic only
CTR	Clicks ÷ impressions	≥ 1.2%	–	Leading
CPC	Media ÷ clicks	Platform-dependent	–	Diagnostic
Hook rate	3-second views ÷ impressions	≥ 25%	–	Leading — creative
Leads	CRM records created	78,880	–	Volume
CPL	Media ÷ leads	₹1,247	₹1,672	Leading — a buying metric, not a business metric
MQL rate	MQL ÷ leads	45.0%	–	Leading
SQL rate	SQL ÷ MQL	55.0%	–	Leading
Qualification rate	Qualified ÷ SQL	63.9%	–	Leading
CPQL	Media ÷ qualified leads	₹7,889	₹10,576	Leading — the metric campaigns are optimised against
Lead-to-visit	Visits held ÷ leads	3.7%	–	Leading
Qualified-to-visit rate	Visits held ÷ qualified leads	23.4%	–	Leading

Metric	Formula	Target	Ceiling	Reads as
Site-visit show rate	Held ÷ booked	≥ 60%	–	Leading
Cost per site visit (<i>booked</i>)	Media ÷ visits booked	₹20,205	–	Leading
Cost per qualified site visit	Media ÷ visits held	₹33,676	₹45,144	Leading — the Phase 0 decision metric
Cost per opportunity	Media ÷ negotiations	₹1,71,429	₹2,29,810	Leading — late funnel
Visit-to-booking	Bookings ÷ visits held	≥ 6.9%	–	Leading — one point is worth ₹39.4 Cr
Cost per booking (<i>media only</i>)	Media ÷ marketing-sourced bookings	₹4.90 L	–	Lagging
CAC	Total acquisition cost ÷ net units sold	₹8.44 L	₹11.32 L	Lagging — the board number
Marketing cost per booking (<i>opex only</i>)	Marketing opex ÷ net units	₹6.33 L	–	Lagging
Revenue	Net units × achieved ticket	₹506.7 Cr at plan	–	Lagging
Gross profit	Revenue × gross margin	₹141.9 Cr @28%	–	Lagging MARGIN IS A PLACEHOLDER
Marketing investment	Marketing opex	₹23.80 Cr	–	Lagging
ROMI	(Gross profit – marketing investment) ÷ marketing investment	3.47× @28%	≥ 3.0×	Lagging — on gross profit, never on revenue
ROAS (<i>media only</i>)	Revenue ÷ media	Diagnostic only	–	Never a decision metric
Revenue ÷ marketing spend	Revenue ÷ marketing opex	Would read 16.0×	–	Meaningless. Not ROMI. Do not present it
Break-even	Bookings needed for gross profit to cover marketing	84 units of 376 @28%	–	Lagging — the statement that survives every margin
Incremental return	Bookings needed per ₹1 Cr of marketing	2.65 @28%	–	The test for any additional crore
Payback	Months to recover CAC from gross profit	≤ 9 months	–	Lagging

Metric	Formula	Target	Ceiling	Reads as
Cancellation rate	Cancelled ÷ gross bookings	≤ 8%	12%	Lagging
Referral rate	Referrals per owner-year	≥ 0.15	–	Lagging — the compounding asset
Marketing % of GDV	Marketing opex ÷ GDV	4.70% (<i>opex</i>) · 6.27% (<i>all-in</i>)	8.40%	Stated last because it is the least useful

THREE READING RULES THAT BELONG IN THE REPORTING TEMPLATE

- 1 · **Compare within a layer, never across.** Judging brand against performance on cost per booking defunds ₹10.25 Cr of the highest-value spend.
- 2 · **Judge demand generation on CPQL, not CPL.** Cheap leads that fail the cash gate are a cost, not a result.
- 3 · **Judge brand, outdoor and the site on holdouts and first-touch, never on last click.**

Deliberately absent from the dashboard: impressions, reach, followers and page views as reported metrics. None of them can change a decision, and each can be used to defend a bad quarter.

TIER	URLS	STATUS
1 — Government / official	8	Used
2 — RERA / regulatory	0	Empty
3 — Official developer	5	Used
4 — Established research	0	Empty
5 — Property portals	9	Used — asking prices only
6 — Major business / news	9	Used
7 — Credible local	3	Used
8 — Secondary	6	Corroboration only
Total	40	across six tiers

WHAT THE TWO EMPTY TIERS COST

RERA / regulatory would have settled achieved prices, absorption, unsold inventory, published unit counts and the legitimacy of every named competitor.

Established research would have given corridor-level demand and supply, velocity, and an independent price series to test the portal figures against.

Their absence is why Appendix B cannot escape asking prices and Appendix C cannot establish velocity. Both are obtainable and neither is expensive.

Research limitations

Stated plainly, because a strategy that hides its own limits is not one.

1 – SEARCH WORKED. PAGE RETRIEVAL DID NOT

Every URL in Appendix F is real and resolves. Not one of them was opened. Outbound page fetches returned EGRESS_BLOCKED, and direct requests to crda.ap.gov.in and rera.ap.gov.in returned 403 policy denials.

Claim content therefore comes from search-result summaries, not from reading the source. **A Tier 1 domain means the domain is authoritative — not that the document was verified.**

2 – NO PRIMARY BUYER RESEARCH EXISTS

No surveys, interviews, focus groups, CRM data or walk-in analysis of any kind. Every behavioural attribute across all eight segments is hypothesis, and the priority scores are a weighted judgement, not a measurement.

3 – EVERY PRICE IS AN ASKING PRICE

No transaction or registration data was obtained. The 50% locality premium underneath the whole revenue model is therefore untested, and Community A prices above a delivered comparable with no delivery record to justify it.

4 – NO CONSTRUCTION COST DATA

The 28% gross margin is a placeholder. Every ROI, ROMI, break-even and CAC-ceiling figure in this deck is arithmetic on that placeholder. Contractor quotations are the only fix.

FIVE THINGS THIS RESEARCH SEARCHED FOR AND COULD NOT FIND

WHAT WAS SOUGHT	WHY IT MATTERS	STATUS
A verified 2026 headcount for people working in Amaravati	The government segment is sized against 2016 reporting [S19] — nine years stale	Not found. Segment de-weighted
Project-level evidence of ₹2.2-2.8 Cr villa depth	₹268 Cr of the plan is priced into that band	Not found across eight rounds. Weak evidence of absence

WHAT WAS SOUGHT	WHY IT MATTERS	STATUS
A DPR or notification for an Amaravati greenfield airport	It appears in competitor marketing	Not found in two separate searches. Excluded entirely
Corroboration of a net-zero-energy villa claim	It would be a creative pillar	Not found. Not used
KMV’s contractual scope on AIIMS Mangalagiri	The Ministry names HSCC as executing agency [S05]; the group’s own page does not define scope [S17]	Not established. The credential is not claimed anywhere in this deck

THE SINGLE MOST VALUABLE NEXT STEP IS NOT MORE ANALYSIS

It is **three conversations**. KMV on the AIIMS work order and the Vivaan booking book; a records agent on 24 months of IGRS registrations; a mystery shopper on two villa projects.

Between them they close the four items that carry more risk than everything else in this deck combined — and two of the three are free.

Prepared by Kiran Basa. Marketing Strategy Assignment — KMV Spaces, Amaravati / Mangalagiri. Submitted to Mr. Anudeep. **Nothing in this deck has been confirmed by KMV Spaces**, and no figure here should be represented as a KMV fact. The project described is the hypothetical one set out in the assignment brief.

Marketing Strategy Assignment — KMV Spaces, Amaravati / Mangalagiri. Prepared by Kiran Basa, submitted to Mr. Anudeep.

The exact project location, product mix, launch dates, approvals, final pricing, inventory, construction status and commercial assumptions were not provided in the brief. **Everything derived from them is labelled Derived calculation or Working assumption and requires KMV validation.** No industry benchmark has been manufactured, and no estimate is offered anywhere for KMV’s actual marketing budget, spend, headcount, cost per lead, sales velocity or inventory position — none was available.
